

Factor B and C2 protein point mutants,

A method for enhancing the activity of anti-cancer antibodies,
The pharmaceutical composition and the use of mutants

Author: Aleksandra Urban, Anna Felberg, Marcin Okrój

www.mug.edu.pl

Proposed solution

- Enhancing anti-cancer activity of therapeutic antibodies
- New drug candidate of biological origin
- New therapies based on factor B and C2 protein

Competitive advantages with respect to known and applied methods

- The approach counteracts activity of multiple complement inhibitors on tumor cells, with no need to target them separately
- Needs relatively low concentration of agent to achieve the substantial effect
